

PAROC Winter mat

PAROC Winter mat (XGF 003)

PAROC Winter mat (XGF 003) consists of mineral wool mat, wrapped in friction-treated polyethylene foil, and it is used as insulation of concrete and molds during casting in the winter.

In connection with excavation in the winter, the ground should be covered in advance with an insulating material. Hereby, you can use the free heat from the ground. Most of the time, a 50 mm winter carpet is sufficient, but in the case of severe, long-term cold, you should double the thickness.

When the excavation is finished, the bottom of the excavation must be protected against frost. After casting, the new concrete must be protected with the PAROC Winter mat as quickly as possible.

- APPROVALS:** N/A
- APPLICATION:** Frost protection, laid on top of ground or mold after casting to prevent freezing
- PACKAGE / STORING:** Bundles on pallet / bundles

DIMENSIONS

Product code	thickness x width x length	packing	color	EAN 64380
PAROC Winter mat (XGF 003)	50 mm x 1350 mm x 3100 mm	9 pcs / bundle	red/white, black text	8556579
	50 mm x 1350 mm x 3100 mm	4 bundles / pallet	red/white, black text	8556549
